Stay Alive Crack+ Free Download (Latest)

Stay Alive is an application developed to keep Internet connection alive without any user input. Especially helpful for all those still using a dial-up connection, Stay Alive comes with a very user-friendly approach, grouping the essential options in a tiny window. Basically, the application is aimed at users who are automatically disconnected by their ISPs whenever their connection is idling, trying to simulate Internet

activity to prevent this from happening. The main window of the app shows the time left till the next “activity simulation”, but also lets you input the interval for this process. There are a few options too in order to launch the program with Windows and start its engine whenever you load the app.

But what’s more important is that Stay Alive comes with a dedicated option to randomize the interval for simulating Internet activity, which is quite helpful in case your ISP blocks ping requests and thus disconnects you. Stay Alive doesn’t require any special computer skills, but it’s still recommended to have a look in the “Help” section because it comes with important documentation on the available features. To sum up, Stay Alive is an app that does its job when it comes to dial-up accounts, preventing your computer from getting disconnected from the Internet. It has just a few options and comes with a very basic interface to provide one click access to the built-in features.

WASHINGTON — When

Jay Inslee, the Democratic governor of Washington, introduced his first plan to meet the state's carbon-emissions goals in January, the bill offered a potent reason to believe Washington could deliver on its promise to a cleaner, greener economy. The bill included a proposal to tax carbon emissions and use the money for clean energy research and development. With just three weeks left in the session, that hope is gone. On Wednesday, Mr. Inslee's bill was replaced with a much narrower measure — one that would have doubled the sales tax to 8.5 percent and applied it to about half of the state's electricity, making it the highest in the country. Washington is already one of seven states that use a market-based program, the regional cap-and-trade system that allocates a set number of carbon allowances, and it would have been the first to adopt a full-blown carbon tax. So far, the effort has received only modest support from business groups, whose members, for one, have been on the sidelines.
