AutoCAD Crack For PC

AutoCAD is a "serious" CAD software that caters to the needs of the following fields: Architecture Automotive and automotive-design Architecture AutoCAD Architecture provides architectural drafting and design. Drafting is a method of describing the lines and arcs of the structure being built. This is done through the use of lines and arcs that are visually linked to a 2D or 3D view of the structure. The user is able to determine the length, width, and depth of the structure. The user can work with these details to determine the size and shape of the various structures. The 3D features of this software aid in the creation of the 3D model. Construction AutoCAD Construction offers a variety of tools for the creation of detailed 2D and 3D designs of building and structures. The structures are created in various sections. Each section can be analyzed from 2D, 3D, or a combination of the two. It is also possible to have the builder see the proposed plans in real time. The sections can be moved, rotated, and/or scaled up or down. The details of the building sections can be annotated with notes, text, and blocks. These sections can be used to create sectionalized drawings that are used in the construction of the building. Landscape and Landscape Architecture AutoCAD Landscape offers a variety of tools for the creation of detailed 2D and 3D designs of building and structures. The structures are created in various sections. Each section can be analyzed from 2D, 3D, or a combination of the two. It is also possible to have the builder see the proposed plans in real time. The sections can be moved, rotated, and/or scaled up or down. The details of the building sections can be annotated with notes, text, and blocks. These sections can be used to create sectionalized drawings that are used in the construction of the building. Digital Signage Autodesk Digital Signage enables the building of digital buildings. This allows for a building to be digitally signed by an Autodesk Designer. The materials, inclusions, and details can be digitally signed and saved. The information can be used to create a digital building that is easily reproduced. The information can be created, stored, and transmitted over a network.
