Alliances are inevitably forged and shattered, with the sole remaining goal being to avoid being overrun. You must ally yourself with one of Astal's city-states, but whose among them do you trust? Players choose a city-state and interact in-game with hundreds of other players who are also fighting against the encroaching behemoth, the Empire. Through diplomacy, peace talks, trickery, and betrayal, you'll make a name for yourself and carve out a place in the history books. Take the reins of one of the largest cities of Astal and defend your allies or strike deals with your enemies in order to control the region. Will your actions change the fate of Astal? In the Unity version of the game you will find the same number of players as in the Classic version, the same number of city-states, and even the same names for each of those city-states. The only difference is the look and feel of the map; however, that difference is done in such a way that players of the Classic version of the game are not hindered from the start, and will feel right at home with the new version of the game from the first minutes of gameplay. New features of the fantasy world of Astal In this new version of the game, many of the features of the Classic version of Astal have been enhanced. As already mentioned above, the look and feel of the map in Unity is different. However, players should find the change to be a smooth transition because: These are the same players in the same cities and the same scripts and stat blocks in the same locations, so the same city-states appear in the new version as they did in the Classic version. The same battle map in the same locations. The same trading system in the same locations. In addition, we have added a new social feature to the game; the Patrol System.
