Photoshop Elements is not a free software and its prices vary from \$10 to \$165. But there's a way to save money. Try CouponMoz. Here are some best shortcuts and features to use for design, editing, resize, copy and paste and more. If you're using Photoshop Elements and want to make your work even faster, if you want to save hard drive space and if you want to use

the computer for hours but not be stuck with a complex user interface, then shortcuts are for you. Here are the best shortcuts to use when working with Photoshop Elements. Shortcuts for the “Window” and the “Workspace”

Windows: Hitting Ctrl + Shift + N will let you open a new Photoshop Elements window right away. Holding Ctrl + Shift + N and then pressing “New Image” will let you select a new file directly in Photoshop Elements. Holding Ctrl + Shift + N and then pressing on the tab marked “New” allows you to switch between different layers directly. Holding Ctrl + Shift + N and then pressing the “Move” tab in the dock and then clicking and dragging lets you select the new location for the active layer or layers. Holding Ctrl + Shift + N and then pressing the arrow at the left of the tab named “Image Layers” will let you work with the active layer from there.

Workspace: Here’s the way to hide all the windows of the “Workspace” and only have the main workspace with your canvas.

Step 1 : In the main dock, click on the tab marked “Workspace”. **Step 2 :** Use the Shift key and the arrow keys to navigate up in the navigation bar of the workspace and hide the other windows.

Hide all windows: **Step 1:** Click on the tab marked “Workspace”. **Step 2:** Navigate to the left in the navigation bar, and then hold Ctrl and press H to hide all the windows. **Step 3:** With the windows hidden, you can use the “Move” tab in the dock to copy and paste your 05a79cecff

Gonioterma camelella Gonioterma camelella is a moth of the family Depressariidae. It is found in Portugal. The wingspan is 8–9 mm. The forewings are pale violet grey with the costal edge violet. There is a straight ochreous-white line from the base of the dorsum to the middle of the disc and there is a short whitish very oblique streak running from beneath the costal edge to the middle of the dorsum and there is a black line on the base of the dorsum. There is an elongate dark grey patch extends on the costa from the base to the middle, edged posteriorly by grey suffusion, and with an undefined oblique streak from beneath the middle of the costa to the tornus, edged posteriorly by similar suffusion. A strongly angulated series of dark fuscous dots is found from three-fourths of the costa to the tornus, reaching nearly half across the wing, the terminal space between these narrowly whitish, bounded on the costa by a series of black marks. The hindwings are grey, paler towards the base. References Category: Moths described in 1925 Category: GoniotermaQ: Merge two dicts by key, but preserve order of second dict I have two dicts: a = {1: 'foo', 2: 'bar', 3: 'baz'} b = {2: 'foo', 3: 'bar', 1: 'baz'} I want to merge the two dicts preserving the order, like this: merged = {1: 'foo', 2: 'foo', 3: 'bar', 1: 'baz'} My current method is to keep the order of a and b individually by just appending values to them: merged = {} merged.update(a) merged.update(b) How can I do the same in a single step? A: merged = {key: a[key] if key in a else b[key] for key in a} Lepturus paucituberculatus Lepturus paucituberculatus, the tiger thorny-headed snake, is a species of nonvenomous colubrid snake.

Q: SQL Server Error Handling - Attribute Table I have a following table in SQL Server: CREATE TABLE [dbo].[AttTable] ([id] [bigint] IDENTITY(1,1) NOT NULL, [col1] [bigint] NULL, [col2] [bit] NULL, [date] [date] NULL, [SubmissionFrequencyType] [int] NOT NULL, [SubmissionFrequencyValue] [int] NOT NULL, [GeneratedDate] [date] NULL, [SubmissionNbr] [int] NULL, [Name] [nvarchar](max) NULL, [Heading] [nvarchar](max) NULL, [Description] [nvarchar](max) NULL, [SubmissionClassification] [nvarchar](max) NULL, [SubmissionType] [nvarchar](max) NULL, [clause] [nvarchar](max) NULL, [CorpID] [bigint] NULL) ON [PRIMARY] ALTER TABLE [dbo].[AttTable] ADD CONSTRAINT [PK_AttTable] PRIMARY KEY CLUSTERED ([id] ASC) WITH (PAD_INDEX = OFF, STATISTICS_NORECOMPUTE = OFF, IGNORE_DUP_KEY = OFF, ALLOW_ROW_LOCKS = ON, ALLOW_PAGE_LOCKS = ON) ON [PRIMARY] I need to insert some data, and all goes OK, but if some data fails to insert, then I need to roll back and return some messages. My initial plan was to use AFTER UPDATE trigger, and to change type of col2 to bit, and to have another table which holds on a rollback_url column, and check it in trigger before insert. Is this a good approach? A: You can do this ALTER TABLE AttTable
