How Does The Technology Work? The most exciting aspect of the new physics is the inclusion of a new player movement engine that allows players to quickly and precisely turn and spin on the ball with the help of ultra-realistic motion capture data. Players can even jump up and head the ball (a highlight of our match at Anfield last season). The player movement and ball control improvements in FIFA reflect the game-changing level of player-to-player interaction introduced by the most authentic, real-life gameplay innovations in FIFA history. The new system uses the most accurate physics engine available in the business to re-enforce the fact that players now really influence the ball's movement in the most authentic way ever. The new player movement engine allows players to twist on the ball and work in sync with their teammates to create new possibilities. The playmaker can call for a teammate to run over the top of the defense, when the other players are unable to move out of their normal positions, because the playmaker can turn and spin on the ball like never before. This type of player movement and ball control allows players to determine the flow of the game and dictate the outcome of challenges. The Player Movement and Ball Control Changes A new "LAWS of Movement" governs the way players move in FIFA. Law 1: Keep the Ball on the Ground. Your players retain possession of the ball when one of their feet touches the ground first, as long as they are not supporting themselves with their other foot. Law 2: Always Keep Control. In defence, players are always the last player to move, and the first player to move after a tackle or interception. In attack, it's the other way around. In order to play a high-pressure pass, the attacker is almost always the first one to move. Law 3: Never Give the Ball Away. When in possession, players attack enemies aggressively and look for every possible opportunity to avoid giving the ball away. Law 4: Work in Co-ordination. Players look for the best options and act in co-ordination, moving with the ball and working together as a team. Players are always in sync with their teammates. Law 5: Always Look for the Advantage. Whether you're in possession or not, your players look for any type of advantage to provide momentum and the best chance of scoring. Law 6: Be Active. In possession,

FIFA (from FIFA: Football, Management, Tactics) is a series of association football video games with EA developed by DMA Design and published by EA Sports. The series debuted in August 1991 with EA Sports' inaugural game and has since released over 30 titles. FIFA Soccer and FIFA International Soccer were developed by EA Canada, which was later acquired by EA Sports. The newer titles were developed by EA London. In 2002, EA Sports spun off into a new company called EA SPORTS Big Picture Games, which was acquired by EA in 2007. FIFA is known for its high-quality football, so the core gameplay in the series revolves around the player's ability to construct a coherent playing style out of the available tactics, strategies, and training-based actions. The series has also added many other features, from player customization to fantasy football. The games have seen an over 900% increase in sales every year since their debut, with over 112 million copies sold to date. Source: How has it done in the past? FIFA games have been around for decades, and according to the research of GamesIndustry.biz, they have never had a better year. In fact, between the years of 2001 and 2014, there have only been two years in which the series took a dip in sales – and in those two years, the game received much negative feedback. FIFA Soccer 99 (99) was the first title in the series, and brought an entirely new approach. The goal of the new game was to focus on skill rather than luck. AI teams couldn't build rosters to specialize in the ball control games of the 70s and 80s, so the game included a tactical RPG component, allowing players to train to specialize in their preferred style of play. This was successful, and the game received a 90 Metacritic average. FIFA '99', released the following year, is the second most popular entry in the series, even though many fans decried it as the game that mucked everything up. It was a full on RPG overhaul, and players could now set the squad numbers of teammates. The game also took a different approach to substitutions, as players could now be removed from the pitch during matches, and they could be replaced. Two years later, FIFA 2000, came the graphical leap forward, with full 3D models. This was a complete redesign that brought a bc9d6d6daa
