If I do the following, it will not compile, but I have no idea where the compile error occurs. Class.OrderByDate = OrderByDate.Desc Class.Where(p => p.OrderByDate >= lastDate) That one will compile, and I have no idea where the compiled query goes. I think I'd like to know that. I've verified the query returned by the compiled query has the exact same result set as if I just wrote the Linq query. A: Sorry to say, but I don't think you want to know where the compiled query goes. First of all, the class OrderByDate in your example is not the same as in your example. For example, this query: Class.OrderByDate = OrderByDate.Desc Is equivalent to the following query: Class.OrderByDate = new OrderByDate().Desc The problem is that the property OrderByDate is evaluated at compile time, whereas the property OrderByDate.Desc is evaluated at run time. So, in the first instance, the compiler will treat Class.OrderByDate as a constant, and so it has no problem compiling the first statement. However, you end up with a runtime error because of the following (erroneous) premise: Class.Where(p => p.OrderByDate >= lastDate) That's because, at runtime, the property OrderByDate is not the same as the property OrderByDate.Desc. The latter is deferred until run time. Hence, you could rewrite the code as follows, which would compile: Class.
