Neurofibromatosis type 1 (NF1) is a dominantly inherited disease that can present with neurocutaneous manifestations. However, peripheral neuropathy, the most common clinical feature, can be the presenting feature. Asymptomatic neuropathy has been reported in a small number of patients. We report a patient with NF1 who presented with asymptomatic neuropathy and its subsequent spontaneous regression. A 41-year-old Hispanic male presented with peripheral neuropathy, which had progressed over a period of 3 years. He had no other features of NF1. The neuropathy responded well to corticosteroid therapy.Cultural Exposé: Arabic Language THE "COPYANDPASTE" OF THE PEOPLE'S PASTA You'd think the world would need hundreds of languages, but when you look around, the only languages that seem to be truly global are the ones written in Roman letters. Because of this, we also find that languages, from Spanish to Arabic to Russian, that speak no Roman letters are seen as things you have to study in school, not something you use at home or for your daily business. But on the contrary, they are languages that you take into your heart. To take some of the best of these out of the realm of the language classroom and the library to the streets of your town is a difficult task, but a task that will take many years. In the meantime, the next best thing is to work on making these languages easier to learn. After all, I'm sure that you don't want to get left behind while the rest of the world is copying from the Greek or Latin sections of the dictionary.
